

Contents

Introduction	vii
Acknowledgements	x
1 What is an Information System?	1
Data • Information • The three stages of doing tasks • Manual information systems • Computerised information systems • Examples of computerised information systems	
2 The Components of an Information System	7
Hardware and software • Why use computers? • Are there any drawbacks in using computers? • Processing data • Types of computer • Peripheral devices • Microprocessors	
3 The ‘Ins’ and ‘Outs’ of Systems: Input and Output	14
The ‘ins’ and ‘outs’ of a video library • Input devices • Output devices	
4 Storing Data	29
The storage of data • Memory (main store) • Magnetic media • Optical disks	
5 Software	34
What is software? • Operating systems (systems software) • Multitasking • Multiuser • User interfaces • Applications software • Programming languages • Translation programs	
6 Collecting Your Data	42
The problems with college enrolments • Coding data • Putting the details into the computer • Flood warning: an example of automatic data capture • Automatic data capture using signals • Turnaround documents	
7 Checking Data	53
Reasons for errors • Consequences of errors • How are errors avoided? • Types of error • How to avoid errors	
8 How Data Is Stored: Databases	61
The parts of a database • A card box filing system • Record design • Manual filing systems • Computerised databases	
9 Types of Computer Operation	72
Life in the fast lane • Real-time processing • Doing all the processing in one go: batch processing • Multitasking and multiprogramming • Transaction processing • Multi-access and timesharing	

10 Data Transfer	77
File conversion • ASCII Files • Transferring files between wordprocessors • Data/file compression • Digital and analogue computers	
11 Ways of Presenting Your Data	82
Hard copy • Presentation graphics • Multimedia • CD-ROM • Sound • MIDI • Virtual reality	
12 How to Describe an Information System	87
Describing systems • Structure diagrams • Data flow diagrams • Systems flowcharts	
13 Systems Analysis: Sounds Hard, What is it?	95
Harlequin Aquatics • Fact finding • Feasibility study • Analysis phase • System design • Testing the system • Implementing (or introducing) the new system • Documentation • System evaluation	
14 Weather Forecasting: An Application of Data Logging	105
Weather reporting: the old way • Problem • The solution • Weather reporting • The sensors • Analogue-to-digital conversion • Advantages of data logging • Transferring weather data to another package • Weather satellites	
15 Transferring Data Around: A Company with a Communication Problem	113
Problems with the existing system • The solution to Binscope's problem • Networks • Local area networks • Wide area networks • Network topologies • Modems • The bits which make up a network • ISDN (Integrated Services Digital Network) • Telecommunications • Internet Service Provider (ISP) • The Internet • Electronic mail • Message sending • Protocols and handshakes • File compression • Speed of access • Bandwidth • Cost of installation • Electronic data interchange (EDI)	
16 System Security	128
Computer security • Physical security • Computer theft • Protection from fires • Protection from dust and extremes of temperature • Software security • Protecting your files • Project advice • The difference between security and integrity	
17 Data and You: The Data Protection Act	135
Computers and privacy • Loyalty cards • The reasons behind the Data Protection Act • The 1998 Data Protection Act • Data subjects and data controllers	

18	Computers and the Law	146
	Computer crime • Credit card use • Automated teller machines (ATMs) • Credit card fraud • Electronic fraud • Phantom withdrawals • Smart cards • Software piracy • The Copyright, Designs and Patents Act 1989 • The Computer Misuse Act 1990	
19	The Social Effects of Information Systems	152
	Social and economic effects of IT • Is information technology a good thing? • Changing employment patterns • Identity cards move a step closer • The shape of things to come • Environmental, ethical, moral and social issues raised by information technology	
20	Controlling Things	160
	Robots • Computers in control • Process control • Pseudo-code • Computers in greenhouses • Computers and safety of cars • Data logging	
21	Computers and your Health	171
	The problems • Protecting the workforce • Things to consider when designing an office	
22	The Electronic Office	176
	The paper chase • Equipment and facilities in an electronic office	
23	Simulations: Almost as Good as the Real Thing	181
	Modelling • Games • Model Builder • Expert systems • Expert Builder • Simulations • An example IT task	
24	Bulmer's: A Case Study	190
	H P Bulmer Ltd (cider makers) • Bulmer's information systems • Process control by computers • Computers in the laboratory • Using computers to help with presentations • Possible new developments	
25	Computer Applications	198
	Information technology: helping to solve crime • Information technology in the supermarket • Information technology in the music industry • IT and the TV/video industry • Information technology and medicine • Information technology and banking • Traffic control systems • Pollution monitoring	
SKILLS FOR COURSEWORK		
26	Advice on Coursework	211
	What software can I use? • Hints and tips • How much do I write? • Can my teacher help me? • Do you get marks for your English? • What is entailed in the coursework? • Coursework for your examination board	

27	Wordprocessing and Wordprocessing Exercises	219
	Hardware and software for wordprocessing • The advantages of wordprocessing • What can you do with wordprocessing software? • Choosing a wordprocessing package	
28	Spreadsheets and Spreadsheet Exercises	229
	What is a spreadsheet? • Entering data correctly • Let the spreadsheet do the work for you • Tips for building a spreadsheet • Mathematical operators • Using conditions in spreadsheets • Printing spreadsheets • Graphs • Business decisions • Finding the maximum volume of a box made from a sheet of metal • Lookup tables • Testing a spreadsheet • Documenting your spreadsheet	
29	Desktop Publishing	246
	Equipment needed • Some features of desktop publishing • Advantages of desktop publishing • When to use a DTP package • Basic techniques used in DTP • Summary of the main features of a DTP package • Glossary of terms used in desktop publishing	
30	Database Coursework	255
	Creating a database • Using the database • Sorting and indexing • Comma separated variables • Creating an information system using a database	
31	Measurement and Control	271
	Turtle graphics • Monitoring physical quantities (temperature, pressure, etc.) using a computer • Other examples of computer control	
32	Modelling	281
	Modelling coursework • Modelling a supermarket queue • Break-even analysis	
33	Graphics Packages	292
	Graphics • Graphics packages • Clip art • Presentation software • Multimedia (hypermedia) presentations • Colour • Computer aided design	
34	Exam Preparation	302
	Revising • The exam	
	Examination Questions	307
	Glossary	335
	Names, Addresses and Internet Sites	342
	Appendix: The Old (1984) Data Protection Act	344
	Index	346
